

HOWADAY Weather App

SYED ASAD ZAMAN

(p180034)

October 2020

HOWADAY Weather forecast app will be a android based which will show location-based weather forecast. This app will get hourly, daily, and weekly predictions as per location provided.

In order to get data about weather of a particular location will make the use of API which will give us data in JSON format. The API which will be used in this project is Open-Weather API and in order to develop this App we will use Android Studio an Open-Source IDE for developing Android applications.

In the real world we make planning of what we have to do in the particular date and time. In our planning weather plays a major role. So in order to solve this problem we propose the solution of developing the weather app which will give us location based hourly, daily, and weekly forecast of weather.

I love to discover new things as this project will give me an opportunity to work on Android Development and API which will make me to discover a new area of Computer Science.
